

05 — User Flows

Primary user: A finance or operations team member responsible for reviewing settlement reconciliation results.

```

graph TD
    A[Open SettleIQ] --> B[Dashboard]
    B --> C[Upload Financial Data]
    C --> D[Validate Files]
    D --> E[Reconciliation Runs]
    E --> F[View Results]
    F --> G[Open Exceptions]
    G --> H[View Evidence + AI Investigation]
    H --> I[Auto-Resolved OR Human Review]
    I --> J[Final Status + Audit Trail]

```

```

Dashboard
↓
Click "Upload Data"
↓
Upload: Payments CSV + Settlements CSV + Fees CSV
↓
System Validates Files
↓
Are files valid?
■■■ NO → Show validation errors → User fixes and re-uploads
■■■ YES → Store data → Start Reconciliation

```

```
graph TD
    A[Start Reconciliation] --> B[Match Payments with Settlements]
    B --> C[Compare Amounts, References and Fees]
    C --> D[Apply Deterministic Rules]
    D --> E[Result?]
    E --> F[MATCHED EXCEPTION]
    F --> G[Store Result Classify Exception]
    G --> H[Build Evidence Package]
    H --> I[AI Investigation]
    I --> J[Deterministic Guardrails]
```

AUTO-RESOLVE HUMAN REVIEW

4. Exception Investigation Flow

Exceptions List
↓
User Opens an Exception
↓
Exception Detail Page
↓
View: Exception type + Related records + Evidence
↓
View AI root cause + Confidence + Recommendation
↓
View Current Status
↓
If Human Review is Required → Open Review Queue

5. Human Review Flow

Review Queue
↓
User Selects Exception
↓
Review Evidence + AI Investigation
↓
Choose Decision
■■■ Approve Resolution
■■■ Reject Resolution
■■■ Keep Unresolved
↓
System Stores Final Decision
↓
Audit Log Updated
↓
Exception Status Updated

Key Rules

- The user does not manually choose Auto-Resolve vs Human Review for every exception.
- Backend guardrails automatically route safe, high-confidence cases to resolution.
- Uncertain or unsafe cases are sent to the human review queue.
- The AI investigates and recommends; it does not directly modify financial records.
- Final decisions and important status changes must be recorded in the audit trail.

Screen Navigation Summary

Screen	Primary action	Outcome
Dashboard	View summary or upload data	Navigate to upload, results, or exceptions
Upload Data	Upload and validate CSV files	Start reconciliation
Reconciliation Results	Inspect results and exceptions	Open exception details
Exception Details	View evidence and AI investigation	Auto-resolved status or review queue
Review Queue	Approve, reject, or keep unresolved	Updated status + audit trail

Core UX Principle

Upload data → understand results → investigate exceptions → review only uncertain cases.
