

MVP Scope Clarification

Important Implementation Note

The wireframes in this document are primarily **visual references for layout, navigation, and user experience**. Some UI elements shown in the generated wireframes are **not part of the current MVP scope**.

The implementation must follow the project specifications, implementation roadmap, and the scope defined below.

Do NOT implement the following features unless explicitly requested later:

- Q&A / Ask AI standalone page
- Reports page
- Settings page
- Any additional dashboard filters not defined in the MVP
- Any functionality not described in the Product Specification or Implementation Roadmap

These elements may appear in some wireframe screenshots because the images were generated as broader UI concepts. **Their presence in a wireframe does not mean they are approved MVP features.**

Final MVP Navigation

The application should implement only the following main navigation sections:

1. **Dashboard**
 2. **Upload Data**
 3. **Reconciliation**
 4. **Exceptions**
 5. **Review Queue**
 6. **Audit Logs**
-

AI Feature Scope

AI should **not** be implemented as a general-purpose chatbot or standalone Q&A system in the MVP.

AI functionality should be used only within the defined exception investigation workflow to:

- Investigate identified exceptions
- Gather and summarize relevant evidence
- Explain the likely cause of an exception
- Generate a recommendation
- Provide supporting evidence for that recommendation

All AI recommendations must pass through the defined **Guardrail and Decision Engine** before any automatic resolution.

AI must not directly modify financial records or bypass the human review workflow.

Wireframe Interpretation Rule

When there is a conflict between:

1. A visual element shown in a wireframe, and
2. The approved Product Specification, System Architecture, Data Specification, Implementation Roadmap, or MVP Scope Clarification,

the written project specifications and MVP scope take priority.

Do not implement additional features based solely on their visual presence in a wireframe

Upload Financial Data

Upload your payments, settlements and fees files to start reconciliation.

1. Upload Files

Drag & drop your files here

or

Browse Files

Supported formats: CSV, XLSX

Maximum file size: 50MB per file

Payments CSV File *

Upload the payments data file

Choose File

No file chosen

Settlements CSV File *

Upload the settlements data file

Choose File

No file chosen

Fees CSV File (Optional)

Upload the fees data file (if applicable)

Choose File

No file chosen

Supported formats: CSV

Maximum file size: 50MB per file

I have reviewed the files and they are ready for validation.

Validate & Continue →

Upload Guidelines

Download the template files using the button above.

Do not modify the column headers.

Ensure date format is YYYY-MM-DD.

Remove empty rows before uploading.

Maximum file size: 50MB per file.
